FOREWORD

This report, the 41st in an annual series, presents information on wage rates and salaries by occupation and on hours of work in Canadian industry. Information is derived mainly from the survey conducted by mail each year at October 1 by the Economics and Research Branch of the Canadian Department of Labour. This survey covers some 13,500 establishments in Canadian industry. The greater part of the report consists of tables showing wage rates and straight-time earnings in more than eighty industries in the Logging, Mining, Manufacturing, Trade, Construction, Transportation and Service sectors of the economy. Standard weekly hours of work are included for most industries. Trends in wage rates are indicated in two additional tables, one of which presents annual 1949-based index numbers of wage rates for most industries surveyed from 1954 to 1958 and the other table shows indexes for certain main industry groups from 1901 to 1958.

Each industry table provides wage rate averages by occupation for the industry as a whole and averages and ranges for each province in which survey coverage is sufficient to warrant publication. Where possible, data are also provided for the Montreal and Toronto metropolitan areas. For some industries, such as Trade, Construction, Printing and Publishing and Truck Transportation, it is possible to provide information for a substantial number of localities. Information is also presented for a number of cities on a cross-industry basis for manufacturing for the following groups: office occupations, labourers and certain maintenance trades.

In 1958 a simplified reporting survey form was introduced to facilitate better reporting. The chief characteristics of this form, in contrast to that used in previous years, is that occupational descriptions have been included on the form itself.

The results of the survey are issued separately between March and July each year in the form of a loose-leaf table for each industry as soon as the data become available. This Report is prepared by the Wages and Salaries Survey Section of the Economics and Research Branch, Department of Labour. Much of the credit for its production goes to the thousands of employers who completed survey questionnaires. To them we express our appreciation.

Yours very truly,

W. R. Dymond

W.R. Dymond,
Director.

AVANT-PROPOS

Le présent rapport, le 41^e d'une série annuelle, fournit des renseignements par occupation sur les salaires, les traitements et les heures de travail dans l'industrie canadienne. Ces renseignements sont largement tirés de l'enquête que la Division de l'économie et de la recherche du ministère du Travail effectue le 1^{er} octobre de chaque année par l'entremise de la poste, enquête qui porte sur environ 13,500 établissements de l'industrie canadienne. Le rapport comprend principalement des tableaux indiquant des taux de salaire et de gains normaux pour plus de 80 industries appartenant aux secteurs suivants de l'économie: exploitation forestière, mines, industrie manufacturière, commerce, construction, transports, et services. On y trouve également l'horaire hebdomadaire normal de travail dans la plupart des industries. Les tendances des taux de salaires sont indiquées dans deux tableaux additionnels, l'un présentant les nombres indices de l'année de base 1949 des salaires de la plupart des industries considérées de 1954 à 1958, et l'autre montrant les indices de certains groupes principaux d'industries de 1901 à 1958.

Le tableau pour chaque industrie présente les moyennes des taux de salaire, par occupation, pour l'industrie entière, et des moyennes ainsi que des marges de taux pour chaque province dans laquelle l'enquête a été suffisamment menée pour en justifier la publication. Quand c'est possible, les données sont également présentées pour le Montréal et le Toronto métropolitains. Dans le cas de quelques industries, comme le commerce, la construction, l'imprimerie et la publication, ainsi que le transport routier, il est possible de donner des renseignements pour un assez grand nombre de localités. Des données dans le cas d'un certain nombre de villes sont fournies sur une base générale pour les groupes suivants de l'industrie manufacturière: emplois de bureau, manoeuvres et certains métiers visant l'entretien.

En 1958, une formule d'enquête simplifiée avait été établie afin de faciliter la préparation du rapport, sa principale caractéristique, comparativement à la formule des années précédentes, consistant à inclure dans la formule même la description de l'occupation.

Les résultats de l'enquête sont publiés séparément pour chaque industrie entre mars et juillet de chaque année, sous forme de tableaux à feuilles mobiles, aussitôt que les données sont disponibles.

Le présent rapport a été préparé par la Section d'enquête sur les salaires et traitements de la Division de l'économie et de la recherche du ministère du Travail, et sa publication a été rendue possible grâce largement à la collaboration des milliers d'employeurs qui ont répondu au questionnaire. Nous leur en exprimons tous nos remerciements.

Le directeur,

W. R. Dymond

(W.R. Dymond.)

TECHNICAL NOTES

Methods and Scope of Survey

The complete survey covers approximately 13,500 establishments throughout Canada, almost all of which employ 15 or more non-office employees. Occupational wage reporting forms are sent to employers in most industries covered. These forms consist of lists of selected occupations, including short definitions of work characteristically performed. The occupational descriptions are designed to help employers to identify the specific jobs for which wage rate information is requested. The descriptions are not to be construed as "standards" for jobs in any particular establishment or industry, as the specific duties involved in some occupations vary somewhat from plant to plant, as well as from industry to industry. In addition, workers in the same occupations do not always have the same work load.

The most important criteria used in selecting occupations for reporting purposes in this survey are: numerical importance in the industry; prevalence throughout the industry; importance in the manufacturing process or to the type of activity carried on; degree of skill; capability of clear definition; and value in reflecting wage levels in the industry.

Employers are asked to submit returns on the basis of 'establishments' rather than for 'firms or companies', as many firms are of a multiple-unit type having one or more branches in different localities. Because of the variety of products made in some industries, there are instances where all branches of a firm do not come under the same industrial classification as the main plant. Establishments are classified according to their most important product or business activity at the time of the survey. The coverage of each industry is described in a footnote to the industry table.

The mailing list for an industry is designed to include the large or important establishments, the majority of the medium-sized establishments, and comparatively few of the small establishments, except when the industry consists mostly of small establishments. The response from the total number of the establishments covered by the survey is consistently close to 90 per cent each year, and in all industries includes the major or large establishments.

The wage statistics generally apply to the last normal pay period preceding October 1 in the survey year. The term "normal pay period" means a pay period in which there were no strikes, unusual layoffs or other abnormal conditions. Wage changes occurring on or after October 1 are not included even though such changes are made retroactive. Two exceptions to the application of the October 1 date are the following: Eastern Canada Logging, which is surveyed at December 1 owing to its seasonal nature, and Trade, where establishments are asked to report average straight-time earnings during the three-month period preceding October 1 for those employees on commission for whom there is considerable variation in earnings from week to week.

Information is derived in a different manner for the following industries: Construction (prevailing rates in locality); Railways (rates set in collective agreements); and Stevedoring (rates set in collective agreements).

Nature and Content of Tables

The tables present, on an industry basis, averages and predominant ranges of wage rates by occupation for the industry as a whole, by province, and in some cases by city. The greater or metropolitan areas are included in the major cities reported. Standard hours of work are also presented for the industry as a whole and the provinces, where applicable.

Outside the industries reported in Manufacturing, returns from all establishments surveyed are used for the various industry tables. In Manufacturing, however, returns for smaller establishments are not processed for the purposes of this survey. Criteria for including an establishment in an industry table depend upon the distribution of establishments by size for each industry. The minimum establishment size for each industry is set at the point where the exclusion of smaller establishments does not significantly affect the resultant statistics for the industry.

A minimum of 50 non-office employees has been set as the requirement for an establishment to be included in the tabulations in those industries where more than 90 per cent of all non-office employees reported were in establishments having 50 or more non-office employees; a minimum of 25 non-office employees has been set for industries where from 80 to 90 per cent of all non-office employees reported were in establishments with 50 or more non-office employees; in other industries, where less than 80 per cent of all non-office employees were in establishments having 50 or more non-office employees, varying minima from 8 to 15 non-office employees were chosen. For office occupations the minimum for an establishment to be included has been set at the level of 50 non-office employees, with the exception of head offices where the minimum is 8 office employees.

The classification of industries followed in the report conforms so far as practicable to the Standard Industrial Classification of the Dominion Bureau of Statistics. However, in such industries as Rubber Products, Paper Products and Clothing and Water Transportation, divergencies from the Standard Industrial Classification necessarily occur because of the occupational approach to measuring wage rates used in the Survey.

Cross-industry tables are included to show, in various cities, wage rate information for labourers, selected skilled maintenance trades and salary rates for a substantial number of office occupations.

The maximum basic salaries for first class Firefighters and Police Constables and hourly wage rates for labourers in Works Departments in Municipal Government Service are shown for certain cities.

The wage rates shown for Construction are prevailing rates where there is a concentration of workers at a single rate in a community; otherwise, they are usually median rates, that is the rates above and below which 50 per cent of the workers are paid. The figures for Construction are obtained from wage schedules prepared by the Industrial Relations Branch of the Department of Labour under the Fair Wages and Hours of Labour Act. The wage rate figures shown for Railways and Stevedoring are wage or salary rates as obtained from current collective agreements on file in the Economics and Research Branch.

Explanation of Terms

Average Wage Rate (Time Work) and Straight-Time Earnings (Piece and Incentive Work)

The wage rates of time workers and the straight-time earnings of piece and other incentive workers are compiled separately. In industries where both methods of wage payment are common, separate averages are provided for time and incentive workers. In other industries only the predominant method of payment is shown.

The term "**Average Wage Rate**" as used in this report means the weighted average of straight-time rates paid to all workers reported on a time basis in an occupation. "**Average Straight-time Earnings**" is similarly used, except that it applies only to piece and other incentive workers. To obtain these averages, the wage rates or earnings are multiplied (weighted) by the number of employees receiving each rate, the total product then being divided by the total number of employees reported in the occupation.

Predominant Range

In addition to the averages, predominant ranges of rates and earnings are shown for both time and incentive methods of wage payment. The **Predominant Range** includes the rates for the **middle 80 per cent** of the workers reported although rates for all workers reported in an occupation are used in calculating the average. Ten per cent of the workers receive the highest figure shown in the range or more and ten per cent receive the lowest figure in the range or less.

A **predominant range** is not published for the industry as a whole, since the focus of interest in this type of information appears to have concentrated on the narrower provincial figures. However, it is not possible to derive the range for an industry from the ranges shown for the provinces because the coverage for an industry often extends beyond that indicated by the provinces for which data are published.

Standard Hours

Standard hours per week refers to the number of hours per week after which the majority of workers are considered to be working overtime. Averages of standard hours are obtained by multiplying the number of standard hours by the

number of non-office workers in each establishment and dividing the total hours by the total number of non-office workers. Most industry tables include industry and provincial averages and ranges of standard hours. Similar averages are shown for individual industries and for the main industrial groups in Table 92.

Locality

The average and predominant range of wage rates and straight-time earnings, in most tables, are published for each province where information collected meets the criteria for publication described below. Separate figures are also shown for the Montreal and Toronto metropolitan areas where possible.

The industry average for each occupation includes the provinces listed below it, in addition to any data for other provinces where the criteria for publication are not met. In this sense, the word **industry** refers to the total survey coverage for an industry, which in a number of cases does not extend beyond one or two provinces because of the high geographic concentration of the industry.

Criteria for Publication

For an average or a range to be published the rates must apply to at least 10 workers in the occupation in 3 establishments, or to any number of workers in excess of 15 in 2 establishments, provided that 80 per cent or more of the total number of workers are not reported by one of the 2 establishments.

These criteria are applied for two reasons: to avoid revealing the rates paid by any one establishment and to insure a reasonable degree of representativeness of the data.

Exceptions to this rule occur where, owing to the nature of the industry or service, the concept of an establishment does not apply. The industries involved include Municipal Government Service, Urban and Suburban Transportation Systems and Daily Newspapers.

Characteristics of Statistics of Wage Rates and Straight-time Earnings

Some important features of the data on wage rates and straight-time earnings are described below:

(1) The most common type of time rate is an hourly rate under which the employee is paid a fixed amount for each hour worked. Consequently, in most cases where daily, weekly or monthly rates are reported, these are converted to an hourly basis. However, daily, weekly or monthly rates are sometimes shown for occupations in industries in which these methods of wage payment are common. When monthly rates are converted to weekly rates or vice versa, the conversion factor used is $4 \frac{1}{3}$ weeks per month. When weekly rates are converted to hourly rates, the weekly rate (exclusive of overtime or other premiums) is divided by the standard weekly hours worked as reported. All rates include cost of living bonus payments when applicable.

(2) The most common types of straight-time earnings are those based on piece-work or various production bonus systems; other types are based on commission and mileage.

(3) Overtime earnings are not included. Neither are shift differentials, non-production bonuses (except cost of living bonus payments), shares in company profits and the monetary value of such fringe benefits as group insurance, sick benefits, uniforms, etc. The rates are derived from the employee's wage before deductions are made for taxes, unemployment insurance contributions, pension payments, etc.

(4) Where board and lodging are customarily provided without charge, this is indicated.

(5) The rates are intended to apply to fully-qualified workers in their occupations. Unless otherwise stated, the rates apply to male workers only. Where women and men are reported in an occupation, separate rates are shown for them. Rates for beginners, learners, apprentices, foremen and lead hands, are not included, although rates for helpers are sometimes shown separately.

(6) The rates for part-time employees working less than half the standard hours are not included.

Method of Calculation of index numbers

Since indexes of average wage rates were first published in 1921, improvements have been made in the quality of the primary data, in the extent of industrial and occupational coverage, and in certain of the methods of calculating index numbers. While improvements in the quality and scope of wage rate statistics have been made regularly, major revisions in the methods of calculating index numbers have been introduced infrequently and only when there was a change in the base period.

The industry index numbers are derived from occupational indexes, these being calculated on the base of average wage rates in 1949 as 100, using a system of "aggregates of weighted averages".

Certain non-office occupations are selected as being representative of all non-office occupations in the industry. These occupations are selected to represent employees at various skill levels and employees of both sexes.

Average wage rates are calculated for each of these occupations within the industry for each of the five regions in Canada — the Atlantic Provinces, Quebec, Ontario, the Prairie Provinces, and British Columbia. However, if any region contained less than 2 per cent of the industry's labour force in 1951, no average is calculated for that region.

For any one occupation, the regional average wage rates are multiplied by a percentage corresponding to the proportion of the industry's labour force in each region in 1951. The percentage for a region is held constant from year to year.

The sum of the products for any year, expressed as a percentage of a similar aggregate for the base year, 1949, is the index number for the occupation.

These occupational indexes are then multiplied by their appropriate occupational weights, and the aggregate, divided by the sum of the weights is the index number for the industry. Each occupational weight is determined by dividing the number of workers in that occupation for 1951 into the total number of workers in all the occupations selected for the index. The resulting proportion is the occupational weight. These weights are generally held constant from year to year.

To obtain an index number for a major group, such as Foods and Beverages or Textile Products, sub-group indexes computed by the above method are weighted by 1951 labour force data for each sub-group and the aggregate divided by the sum of the weights.

Index numbers for industrial divisions such as Mining, Manufacturing, etc., are obtained by weighting the major group indexes by the 1951 labour force data for each major group and dividing the aggregate by the sum of the weights.

Finally, the General Average Index of wage rates for Canada as a whole is derived by weighting the division indexes by the 1951 labour force in each division and dividing the aggregate by the sum of the division weights.

The industrial and regional weights used are based on labour force data, as reported in the 1951 Census of Canada. In the occasional case when it has been found impossible to secure labour force totals from this source, an estimate has been made from returns obtained in the annual survey of wages and working conditions, October 1951.

Historical Note

Statistics of wage rates and hours of labour have been collected by the Canadian Department of Labour since its formation in 1900 and results were published from time to time in the Labour Gazette.

The first separate report on wages was issued in 1921 as a supplement to the Labour Gazette. This was the first in the present series, and contained statistics for certain trades within various industries in a number of cities. The information was obtained mainly from employers and trade unions, but data from collective agreements, information obtained by departmental representatives in the field and that received from Labour Gazette correspondents were also used in early reports. In subsequent reports, the scope of the statistics has been gradually broadened, additional groups of industries have been added over the years, and the report now contains information for selected occupations in the principal industries of Canada.

NOTES TECHNIQUES

Méthode et Cadre de L'enquête

L'enquête porte sur quelque 13,500 établissements au Canada, dont la plupart emploient 15 travailleurs hors bureau ou plus. Des listes d'occupations aux fins de rapports sur les salaires sont adressées aux employeurs de la plupart des industries concernées. Ces listes énumèrent des occupations choisies et donnent une brève description du travail propre à chacune. Les descriptions des occupations permettent aux employeurs d'identifier les emplois particuliers pour lesquels des renseignements sur les taux de salaire sont désirés. Ces descriptions ne sont pas posées en "normes" pour les emplois d'une industrie ou d'un établissement particulier, étant donné que les fonctions propres à certains emplois varient quelque peu d'un établissement à l'autre et d'une industrie à l'autre. En outre, les travailleurs d'une même occupation n'ont pas toujours la même somme de travail.

Les critères les plus importants auxquels on a eu recours dans le choix des occupations à inclure dans les listes aux fins de rapports sur les salaires sont les suivants: leur importance numérique dans l'industrie; leur prédominance dans l'industrie; leur importance dans le procédé de fabrication ou par rapport au genre d'activité poursuivie; le degré d'habileté qu'elles exigent; leur adaptabilité à une définition précise, et leur valeur indicatrice des niveaux de salaire dans l'industrie.

On demande aux employeurs de faire rapport sur le plan "établissement" plutôt que "entreprise ou compagnie", car bon nombre d'entreprises sont du type unités multiples, ayant une succursale ou plus dans diverses localités. A cause de la diversité des produits fabriqués dans certaines industries, il arrive que toutes les succursales d'une même entreprise ne tombent pas dans la même classification que l'entreprise mère. Les établissements sont groupés d'après leur produit principal ou activité majeure lors de l'enquête. Le cadre de chaque industrie est indiqué dans un renvoi au bas du tableau intéressant l'industrie.

La liste d'envoi particulière d'une industrie inclut les établissements importants, la majorité des établissements d'importance moyenne, et relativement peu des petits établissements, sauf quand l'industrie se compose surtout de petits établissements. La réponse obtenue de l'ensemble des établissements visés par l'enquête s'établit régulièrement à près de 90 p. 100 chaque année, et dans toutes les industries elle englobe les établissements les plus importants.

La statistique des salaires s'applique généralement à la dernière période normale de paie précédant le 1er octobre de l'année étudiée. L'expression "période normale de paie" signifie une période exempte de grèves, de mises à pied exceptionnelles ou d'autres conditions anormales. Les changements dans les salaires survenant le 1er octobre ou après ne sont pas considérés, même quand leur effet est rétroactif. Les deux exceptions dans l'application de la date du 1er octobre sont les suivants: l'exploitation forestière dans l'est du Canada, qui fait l'objet d'une enquête le 1er décembre à cause de son caractère saisonnier; et le commerce, où les établissements doivent signaler pour le trimestre précédant le 1er octobre les gains moyens normaux des personnes rémunérées à la commission dont les gains varient sensiblement d'une semaine à l'autre.

Les taux de salaire indiqués pour la construction sont les taux courants ou régnants où il y a une concentration de travailleurs à un taux unique dans un même centre; dans les autres cas, il s'agit ordinairement de taux médians, soit de taux au-dessus et au-dessous de ceux auxquels 50 p. 100 des travailleurs sont rémunérés. Ces données relatives à la construction sont tirées des barèmes de salaires préparés par la Division des relations industrielles du ministère du Travail en vertu de la loi sur les justes salaires et les heures de travail. Les données sur les taux de salaires dans les chemins de fer et le débardage sont des taux ou salaires de base tirés de conventions collectives aux archives de la Division de l'économie et de la recherche.

Explication des Termes

Taux de Salaire Moyen et Moyenne des Gains Normaux

Les taux de salaire des travailleurs rémunérés au temps et les gains normaux des travailleurs rémunérés à la pièce ou selon un autre mode de rémunération au rendement sont établis séparément. Dans les industries où les deux modes de rémunération sont courants, les moyennes et les marges sont indiquées séparément pour les travailleurs rémunérés au temps et les travailleurs rémunérés au rendement. Dans les autres industries, seulement le mode prédominant de rémunération est indiqué.

L'expression *taux de salaire moyen* utilisée dans le présent rapport représente une moyenne pondérée des taux normaux versés aux travailleurs rémunérés au temps dans une occupation donnée. L'expression *moyenne des gains normaux* peut être définie de la même façon, sauf qu'elle s'applique uniquement aux travailleurs rémunérés à pièce ou selon un autre mode de rémunération au rendement. On obtient ces moyennes en multipliant (pondérant) les taux de salaire ou les gains par le nombre de travailleurs rémunérés à chacun des taux, puis en divisant le total ainsi obtenu par le nombre de travailleurs dans l'occupation donnée.

Marge Prédominante

Outre les moyennes, on établit des *marges prédominantes*. Ces marges englobent les taux du 80 p. 100 moyen des travailleurs. Dix pour cent des travailleurs reçoivent le taux maximum indiqué à la marge ou plus, et dix pour cent reçoivent le taux minimum ou moins. Dans le calcul de la moyenne, cependant, on tient compte des taux applicables à tous les travailleurs qualifiés d'une même occupation.

Il n'est pas publié de *marge prédominante* pour l'ensemble de l'industrie, car l'intérêt touchant ce genre de renseignements semble surtout porter sur les données provinciales plus restreintes. Il est, toutefois, impossible d'établir la marge pour une industrie d'après les marges provinciales données, vu que souvent l'industrie dépasse le cadre de ces provinces.

L'expression *heures normales de travail* signifie le nombre d'heures par semaine en sus desquelles les travailleurs sont considérés comme fournissant des heures supplémentaires. On obtient la moyenne des heures normales en multipliant

le nombre d'heures normales par le nombre de travailleurs hors bureau de chaque établissement, puis en divisant le total ainsi obtenu par le nombre total de travailleurs hors bureau. La plupart des tableaux donnent les moyennes et les marges des heures normales par semaine, par province et par industrie. Des moyennes semblables sont indiquées pour des industries particulières et pour les principaux groupes d'industries au tableau 92.

Localité

Dans la plupart des tableaux, la moyenne et la marge prédominante des taux de salaire et des gains normaux sont publiées pour chaque province où les renseignements reçus répondent aux conditions de publication indiquées plus loin. Des chiffres distincts sont également donnés pour les régions métropolitaines de Montréal et de Toronto, là où il est possible de la faire.

La moyenne de l'industrie pour chaque occupation donnée comprend les industries énumérées plus bas, en plus de tous autres chiffres pour d'autres provinces où les conditions de publication ne sont pas remplies. En ce sens, le mot *industrie* signifie le cadre de l'enquête sur une industrie, enquête qui, dans un certain nombre de cas, ne s'étend qu'à une ou deux provinces, en raison de la forte concentration géographique de l'industrie.

Conditions de Publication

Une moyenne ou une marge n'est publiée que si les taux s'appliquent à au moins 10 travailleurs d'une même occupation dans 3 établissements ou à un nombre quelconque de travailleurs en sus de 15 dans 2 établissements, sous réserve qu'un des 2 établissements signale 80 pour cent ou plus du total des travailleurs.

Ces conditions s'appliquent pour deux raisons: éviter de révéler les taux de salaires versés par un établissement quelconque, et faire en sorte que les données soient raisonnablement représentatives.

Il y a exception à cette règle quand, en raison de la nature de l'industrie ou du service, la définition d'établissement ne s'applique pas. Les services municipaux, les systèmes de transport urbain et suburbain et les journaux quotidiens tombent dans cette catégorie.

Caractéristiques de la Statistique sur les Taux de Salaire et les Gains Normaux

Voici quelques-uns des aspects importants des données sur les taux de salaire et les gains normaux:

(1) Le mode de taux au temps le plus répandu est le taux horaire, en vertu duquel le travailleur touche un montant déterminé pour chaque heure fournie. En conséquence, dans la plupart des cas où se rencontrent des taux journaliers, hebdomadaires ou mensuels, la conversion est faite sur une base horaire. Toutefois, les taux journaliers, hebdomadaires ou mensuels sont donnés quelquefois pour certaines occupations dans des industries où prédomine ce mode de rémunération. Pour convertir les taux mensuels en taux hebdomadaires, ou l'inverse, le facteur de conversion est de 4 1/3 semaines par mois. Pour convertir les taux hebdomadaires en taux horaires, on divise le taux hebdomadaire

Pour chaque occupation, les taux moyens régionaux sont multipliés par un pourcentage correspondant à la proportion de l'effectif ouvrier de chaque région en 1951. Le pourcentage pour une région ne varie pas d'année en année.

La somme des produits pour une année quelconque, traduite en pour-cent du total correspondant pour l'année de base (1949), est le nombre-indice de l'occupation.

Ces indices d'occupations sont ensuite multipliés par leurs poids d'occupation respectifs; le total divisé par la somme des poids donne le nombre-indice de l'industrie. Chaque poids d'occupation a été établie en divisant le total global des travailleurs de toutes les occupations choisies, par le nombre de travailleurs de cette occupation en 1951. La proportion qui en résulte est le poids de l'occupation. Ces poids ne varient pas d'une année à l'autre.

Pour obtenir le nombre-indice d'un groupe principal, comme celui des aliments et boissons ou des produits textiles, les indices des sous-groupes calculés d'après la méthode ci-haut sont pondérés en ayant recours aux données de 1951 sur le facteur effectif ouvrier de chaque sous-groupe, puis le total est divisé par la somme des coefficients de pondération.

Les nombres-indices des divisions industrielles, comme les mines, l'industrie manufacturière, etc., sont obtenus en pondérant les indices des groupes principaux à l'aide des données de 1951 en matière d'effectif ouvrier pour chaque groupe principal, puis en divisant le total par la somme des coefficients de pondération.

Finalement, l'indice général moyen des taux de salaire pour l'ensemble du Canada est établi en pondérant les indices des divisions par le facteur effectif ouvrier en 1951 pour chaque division, puis en divisant le total par la somme des coefficients de pondération des divisions.

On établit les poids industriels et régionaux d'après les données concernant l'effectif ouvrier fournies par le recensement de 1951. Dans les cas exceptionnels où il est impossible d'obtenir de cette source le chiffre de l'effectif ouvrier, une estimation est établie à l'aide de renseignements tirés de l'enquête annuelle sur les salaires et conditions de travail en octobre 1951.

Noté Historique

Depuis sa fondation en 1900, le ministère réunit une statistique des taux de salaire et des heures de travail qu'il publie de temps à autre dans la *Gazette du Travail*.

Le premier rapport distinct sur les salaires a été publié en 1921, comme supplément à la *Gazette du Travail*. C'était le premier rapport de la présente série, et il contenait des données intéressantes certains métiers de diverses industries dans plusieurs localités. Les chiffres étaient tirés surtout de rapports des employeurs et des syndicats ouvriers, mais on utilisait aussi des données puisées dans les conventions collectives et des renseignements fournis par les représentants extérieurs du ministère et les correspondants de la *Gazette du Travail*. Dans les rapports subséquents, la portée de la statistique a été étendue et de nouveaux groupes d'industries ont été ajoutés au cours des années, de sorte que le rapport fournit maintenant des renseignements sur les occupations représentatives des principales industries au Canada.

(exclusion faite du travail supplémentaire et autres primes) par le nombre d'heures normalement fournies par semaine. Tous les taux comprennent les indemnités de vie chère, le cas échéant.

(2) Les gains normaux les plus répandus sont ceux fondés sur le travail à la pièce et les bonis de production; d'autres régimes sont basés sur commissions et indemnités de déplacement.

(3) Les gains pour travail supplémentaire ne sont pas inclus. Ne le sont pas non plus les taux différenciés de poste, les bonis non rattachés à la production (sauf les indemnités de vie chère), la participation aux bénéfices de l'entreprise, ni la valeur en espèces de divers avantages complémentaires tels que l'assurance collective, les allocations pour maladie, les uniformes, etc. Les taux sont établis d'après le salaire du travailleur avant les déductions pour impôts, primes d'assurance-chômage, pension, etc.

(4) Quand la pension et le logement sont habituellement fournis gratuitement, le fait est indiqué.

(5) Les taux sont censés s'appliquer aux travailleurs pleinement qualifiés dans le cadre de leur occupation. Sauf indication contraire, les taux s'appliquent seulement à la main-d'oeuvre masculine. Les taux des débutants, stagiaires, apprentis, contremaîtres et chargés de main-d'oeuvre ne sont pas inclus, mais ceux des aides sont parfois indiqués séparément.

(6) Les taux des travailleurs à temps partiel fournissant moins de la moitié des heures normales ne sont pas inclus.

Méthode de Calcul des Nombres-Indices

Depuis l'établissement des indices des taux de salaire moyens en 1921, on a amélioré la qualité des données primaires, augmenté le nombre des industries et occupations considérées, et perfectionné certaines méthodes de calcul des nombres-indices. Cette amélioration constante et l'extension du champ de la statistique des taux de salaire ne se sont pas accompagnées, toutefois, de révisions majeures dans les méthodes de calcul des nombres-indices; celles-ci n'ont été faites que rarement et seulement à l'occasion d'un changement dans la période de base.

Les nombres-indices de l'industrie proviennent d'indices d'occupations, lesquels sont calculés sur la base des taux moyens de salaire 1949=100, d'après les "totaux de moyennes pondérées".

Certaines occupations hors bureau, choisies de façon à représenter les travailleurs des deux sexes et de divers niveaux de compétence, sont représentatives de l'ensemble des occupations de l'industrie, celles de bureau exceptées.

On établit pour chacune des occupations au sein de l'industrie la moyenne des salaires payés dans chacune des cinq régions du Canada: provinces de l'Atlantique, Québec, Ontario, provinces des Prairies, et Colombie-Britannique. Si, toutefois, une région comptait moins de 2 p. 100 de l'effectif ouvrier en 1951, aucun calcul du taux de salaire n'est fait pour cette région.

Les renseignements sont obtenus de manière différente dans le cas des industries suivantes: construction (taux prédominants dans la localité); chemins de fer (taux établis par les conventions collectives), et débardage (taux établis par les conventions collectives).

Nature et Matière des Tableaux

Les tableaux donnent, par industrie, les moyennes et les marges prédominantes des taux de salaire par occupation pour l'ensemble de l'industrie, par province et, dans certains cas, par ville. Les zones métropolitaines sont incluses dans les principales villes considérées. Les heures normales de travail sont aussi données pour l'ensemble de l'industrie et pour les provinces, quand il y a lieu.

Outre les secteurs signalés dans l'industrie manufacturière, les rapports de tous les établissements touchés par l'enquête sont utilisés pour les divers tableaux d'industrie. Dans l'industrie manufacturière, toutefois, les rapports des établissements moins importants ne sont pas analysés aux fins de l'enquête. Les critères pour l'inclusion d'un établissement dans le tableau d'industrie dépendent de la répartition des établissements d'après leur importance pour chaque industrie. L'importance minimum d'un établissement pour chaque industrie est fixée au point où l'exclusion des établissements moins importants n'atteint pas gravement la statistique pour cette industrie.

Il faut un minimum de 50 travailleurs hors bureau pour qu'un établissement soit inclus dans les tableaux des industries pour lesquelles plus de 90 p. 100 de l'ensemble des travailleurs hors bureau signalés se trouvent dans des établissements comptant 50 travailleurs hors bureau ou plus; un minimum de 25 travailleurs hors bureau lorsque de 80 à 90 p. 100 de l'ensemble des travailleurs hors bureau signalés se trouvent dans des établissements comptant 50 travailleurs hors bureau ou plus; un minimum de 8 à 15 travailleurs hors bureau, selon l'industrie, là où moins de 80 p. 100 de l'ensemble des travailleurs hors bureau se trouvent dans des établissements comptant 50 travailleurs hors bureau ou plus. Dans le cas des emplois de bureau, le minimum pour l'inclusion est fixé au niveau de 50 travailleurs hors bureau, sauf dans le cas du bureau central de l'entreprise, le minimum dans ce cas étant 8 personnes.

La classification des industries suivie dans le rapport se conforme autant que possible à la classification industrielle normale du Bureau fédéral de la statistique. Toutefois, dans le cas d'industries comme celles des produits du caoutchouc, des produits du papier, du vêtement et de la navigation, des divergences par rapport à la classification industrielle normale sont inevitables à cause de la manière de calculer les taux de salaire utilisée dans l'enquête.

Des tableaux pour l'ensemble de l'industrie sont inclus afin de donner, pour diverses villes, les taux des manoeuvres, de certains métiers spécialisés de l'entretien, et les traitements d'un nombre important d'employés de bureau.

Les salaires maximums de base des pompiers et des agents de police de première classe ainsi que les taux horaires de salaires des manoeuvres des services des travaux publics municipaux sont donnés dans le cas de certaines villes.

SUMMARY OF GENERAL WAGE TRENDS

The General Index of average wage rates for all industries moved up 3.9 per cent, or from 156.5 to 162.6 (1949 = 100), between October 1, 1957 and October 1, 1958.

Among the eight main industrial divisions, Electric Light and Power showed the most marked gain in average wage rates, the index having risen by 13.3 points or 7.4 per cent. Wage rates in Construction also rose sharply with an increase of 6.4 per cent. Percentage wage rate advances for the remaining six industrial groups were as follows:

Trade, 4.3; Mining, 4.2; Manufacturing, 3.5; Personal Service, 3.3; Transportation, Storage and Communication, 2.3; and Logging, 2.1 per cent.

In Manufacturing, wage rate increases averaged 3.4 per cent in the Durable Goods industries compared with an average gain of 3.8 per cent in the Non-durable Goods industries sector.

For individual industries the greatest wage rate advance occurred in Urban and Suburban Transportation Systems, where the index increased by 7.8 per cent, or from 158.8 to 171.2. The Fur Goods, Coal Mining, Agricultural Implements, Confectionary, Laundries and Dry Cleaning, Men's Fine Shirts and Radio, Television and other Electronic Equipment industries all recorded average wage rate increases of 6 per cent or more in the year-to-year comparison.

APERÇU DES TENDANCES GÉNÉRALES DES SALAIRES

L'indice général des taux moyens de salaire pour toutes les industries est monté de 3.9 p. 100, soit de 156.5 à 162.6 (1949 = 100), entre le 1er octobre 1957 et le 1er octobre 1958.

Des huit principales divisions industrielles, celle de l'éclairage et de l'énergie électrique a causé l'augmentation la plus marquée des taux moyens de salaire, l'indice s'étant élevé de 13.3 points ou de 7.4 p. 100. De même, les taux de salaire, dans l'industrie de la construction se sont accrus sensiblement, accusant une augmentation de 6.4 p. 100. Le pourcentage de l'augmentation des taux de salaire dans les six autres groupes d'industries s'établit comme suit:

Commerce, 4.3, mines, 4.2, industrie manufacturière, 3.5, services personnels, 3.3, transports, entreposage et moyens de communication, 2.3 et exploitation forestière, 2.1 p. 100.

Dans l'industrie manufacturière, la hausse moyenne des taux s'est établie à 3.4 p. 100 dans le secteur des biens non périssables, comparativement à 3.8 p. 100 dans le secteur des biens périssables.

Pour ce qui est des industries en particulier, ce sont les réseaux de transport urbain et suburbain qui ont accusé la plus forte augmentation des taux de salaire, l'indice s'étant élevé de 7.8 p. 100, soit de 158.8 à 171.2. Les secteurs des articles en fourrure, des mines de charbon, des instruments aratoires, des confiseries, des buanderies et établissements de nettoyage à sec, des chemises de toilette et de la radio, télévision et autre appareillage électronique ont tous signalé des augmentations des taux moyens de salaire de 6 p. 100 ou plus par rapport aux chiffres de l'année précédente.

**Table A – INDEX NUMBERS OF AVERAGE WAGE RATES
BY INDUSTRY, 1954 – 1958**

(RATES IN 1949 = 100)

| Industry | 1954 | 1955 | 1956 | 1957 | 1958 |
|--|-------|-------|-------|-------|-------|
| LOGGING | 138.0 | 138.2 | 160.8 | 168.4 | 172.0 |
| Eastern Canada..... | 137.8 | 136.9 | 163.0 | 169.5 | 173.6 |

¹**Logging – Eastern Canada** – Establishments primarily engaged in cutting pulpwood logs, logs for lumber and for products such as railroad ties, mine timbers and telegraph poles, and in drawing or transporting logs. The above operations are covered by this table whether carried on in independant logging camps, logging camps operated in conjunction with pulp mills or saw mills, or by contractors engaged in cutting timber or pulpwood.

¹**Exploitation forestière, est du Canada** – Etablissements s'occupant surtout de l'abatage des arbres pour bois de pulpe, de la transformation des troncs en traverses de chemin de fer, en étais de mine et en poteaux télégraphiques, et à la traction ou au transport des billes. Les travaux ci-haut sont visés par le présent tableau, qu'ils soient exécutés dans des camps forestiers indépendants, des camps exploités à l'intention de pulperies ou de scieries, ou par des entrepreneurs de coupe d'arbres ou de bois de pulpe.

²Amounts shown are time work rates, except where piece-work is noted, in which cases the amounts refer to straight-time earnings.

²Les montants indiqués s'appliquent au travail au temps, sauf les cas où le travail à la pièce est spécifié; les montants sont alors des gains normaux.

³Board supplied by employer in addition to rates shown.

³Pension fournie par l'employeur en plus des taux signalés.

⁴Value of board, when supplied, is deducted from employee's pay.

⁴Le coût de la pension, lorsque celle-ci est fournie, est déduit de la paie de l'employé.

Table 2 – LOGGING, BRITISH COLUMBIA, COASTAL¹ – Concluded
Tableau 2 – EXPLOITATION FORESTIÈRE, COLOMBIE-BRITANNIQUE, LITTORAL¹ – Fin

October 1 – 1958 – 1er octobre

¹Logging, British Columbia, Coastal – Establishments primarily engaged in cutting pulpwood logs, logs for lumber and for products such as railroad ties, mine timbers and telegraph poles, and in drawing or transporting logs. The above operations are covered by this table whether carried on in independent logging camps, logging camps operated in conjunction with pulp mills or saw mills, or by contractors engaged in cutting timber or pulpwood.

¹Exploitation forestière, Colombie-Britannique, littoral – Etablissements s'occupant surtout de l'abatage des arbres pour bois de pulpe, de la transformation des troncs en traverses de chemin de fer, en étais de mine et en poteaux télégraphiques, et à la traction ou au transport des billes. Les travaux ci-haut sont visés par le présent tableau, qu'ils soient exécutés dans des camps forestiers indépendants, des camps exploités à l'intention de pulperies ou de scieries, ou par des entrepreneurs de coupe d'arbres ou de bois de pulpe.

²Board and lodging is supplied to cooks in addition to rates shown. Lodging only is provided for other workers.

²Pension et logement sont fournis aux cuisiniers en sus des taux indiqués, et le logement seulement aux autres travailleurs.

¹Gold Mining – Auriferous quartz mining only. Does not include alluvial gold mining or copper-gold-silver mining.

¹Minéral aurifère – Extraction du quartz aurifère seulement. Exploitation des alluvions et extraction de cuivre-or-argent exclues.

²This column includes basic rates of workers on incentive bonus plans as well as rates per hour for those on time work.

²Cette colonne comprend les taux de base des travailleurs assujétis à des régimes de primes de rendement, de même que les taux horaires des travailleurs rémunérés au temps.

³This column applies only to workers on incentive bonus plans, that is, the figures shown represent the basic rates plus bonus earnings.

³Cette colonne ne s'applique qu'aux travailleurs assujétis à des régimes de primes de rendement, c'est-à-dire que les chiffres donnés représentent les taux de base accrus des primes.

⁴Includes Filter Operator (Filterman), Grinding-Mill Operator (Ball-Mill Operator; Rod Mill Operator; Tubeman) and Solution Man.

⁴Comprend préposé au filtre, conducteur de machine broyeuse (moulin à boulet, moulin à tige, tube finisseur) et préposé à solution.

¹*Slaughtering and Meat Packing* – This industry includes abattoirs and meat packing plants. Important products of establishments classified in this industry are fresh meats, cured and smoked meats, and sausages and sausage casings. Does not include animal oils and fats as well as poultry dressing, packing and canning.

¹*Abattoirs et conserveries* – Cette industrie comprend les abattoirs et les conserveries de viande. Les produits importants des établissements ainsi classifiés sont les viandes fraîches, les viandes salées et fumées, la saucisse et les boyaux à saucisse. Ne sont pas compris les huiles et graisses animales, de même que la préparation, le conditionnement et la conserve de la volaille.

¹Cotton Yarn and Cloth - Establishments primarily engaged in spinning, twisting, winding or spooling cotton yarn and in weaving fabrics wholly or mainly of cotton such as duck, sheetings, prints, towellings, bedspread fabrics, table damask, drapery and upholstery fabrics. Does not include establishments primarily engaged in manufacturing cotton batting and wadding, gauze, bandages and absorbent cotton and also in spinning, twisting and manufacturing cotton sewing thread or crochet, darning, hand-knitting and embroidery cottons for sale as such.

²Coton, filés et toiles - Etablissements occupés principalement au filage, à la torsion, au renvidage ou au bobinage de filé de coton et au tissage de tissus entièrement ou principalement en coton comme le couill, les tissus à draps, les indiennes, la toile à serviettes, les tissus à dessus de lit, le damas à nappes, les tissus à draperies et la tapisserie d'ameublement. Ne sont pas compris les établissements s'occupant surtout de la fabrication de coton ouaté et coton de rembourrage, du gaze, des bandes de pansement, du coton hydrophile, ainsi qu'au filage, à la torsion et à la fabrication de fil à coudre, à crocheter, à réprimer ou à tricoter et du coton à broder vendu comme tel.

³Most of the employees in this industry are on piece-work.

⁴La plupart des travailleurs de cette industrie sont au travail à la pièce.

¹Woollen Yarn and Cloth - Establishments primarily engaged in weaving woollen and worsted fabrics, such as suitings, coatings, dress goods and flannel; blankets and blanketings; other woollen fabrics and goods. This industry also includes mills whose primary activity is spinning and winding woollen yarn for sale as such.

¹ Laine, filés et étoffes - Établissements s'occupant surtout du tissage d'étoffes de laine ou de laine peignée, comme les étoffes à complet, à paletot, les tissus à robes et les flanelles; les couvertures et tissus à couvertures; autres tissus et lainages. L'industrie comprend aussi les établissements occupés principalement au filage et au renvidage du fil de laine vendu comme tel.

²More detailed information appears in report "Wages and Hours in the Primary Textiles Industry in Canada, October 1958"

² De plus amples renseignements apparaissent dans le rapport "Salaires et heures dans l'industrie textile primaire au Canada, Octobre, 1958".

Table 46 – AGRICULTURAL IMPLEMENTS¹ – Concluded**Tableau 46 – INSTRUMENTS ARATOIRES¹ – Fin**

October 1 – 1958 – 1er octobre

¹**Agricultural Implements** – Establishments primarily engaged in manufacturing agricultural implements, such as ploughs, threshing machines, and binders. Does not include the manufacture of agricultural hand tools.

¹**Instruments aratoires** – Etablissements s'occupant surtout de la fabrication d'instruments aratoires, tels que charrues, batteuses et lieuses. Ne comprend pas les outils à main utilisés en agriculture.

²Mostly Ontario.

²Surtout en Ontario.

¹Household, Office and Store Machinery – Establishments primarily engaged in manufacturing office and store machinery, such as typewriters, cash registers, coin-operated machines, computing machines, scales and balances, and household machines, such as laundry equipment, non-electric refrigerators, washing machines and sewing machines. Establishments manufacturing electric washing machines are also classified in this industry.

¹Machinerie de maison, de bureau, et de magasin – Etablissements s'occupant surtout de la fabrication de machines pour bureau et magasin, telles que dactylographes, caisses enregistreuses, distributeurs automatiques, machines à calculer, balances et machines pour usage domestique, comme batteries de blanchissage, glacières non-électriques, machines à laver et machines à coudre. Fabriques de machines à laver électriques incluses.

Table 51 – MACHINE TOOLS¹ – Concluded
Tableau 51 – MACHINES-OUTILS¹ – Fin
 October 1 – 1958 – 1er octobre

¹**Machine Tools** – Establishments primarily engaged in manufacturing machine tools which are power driven machines employing a cutting tool for work on metal. Important products, classified in this industry are boring and milling, drilling, filing, gear cutting, grinding, honing, and threading machines, lathes, planers, and replacement and repair parts for machine tools. The rebuilding of machine tools and machine-tool accessories are included in this industry.

¹**Machines-outils** – Etablissements s'occupant surtout de la fabrication de machines-outils mécaniques utilisant un outil tranchant pour façonner le métal. Les principales machines de cette catégorie comprennent les aléseuses, fraiseuses, foreuses, limeuses, découpeuses d'engrenages, meuleuses, repasseuses à la pierre, tours, raboteuses et taraudeuses. L'industrie englobe aussi la fabrication des pièces de rechange et de réparation de machines-outils et la réfection des machines-outils et de leurs accessoires.

¹Primary Iron and Steel – Two main types of establishments are classified in this industry (1) Blast furnaces primarily engaged in manufacturing (from ore and scrap) pigiron, blast furnace ferro-alloys and castings made direct from the furnace and (2) steel works and rolling mills engaged in converting pigiron, scrap iron and scrap steel into steel and in hot and cold rolling of steel into blooms, billets, rails, bars and rods. In many cases the processes of conversion and rolling are performed in the same plant. In many establishments the manufacturing processes are carried beyond the rolling stage.

¹Fer et acier primaires – Cette industrie comprend deux genres principaux d'établissements: (1) hauts fourneaux fabriquant surtout, avec du minerai et de la ferraille, de la fonte brute des ferro-alliages de haut fourneau et des pièces de fonte directement du haut fourneau, et (2) aciéries et lamineries transformant en acier la fonte brute et les déchets de fer et d'acier, et laminant l'acier, à chaud ou à froid, en pains, billettes, rails, barres et tiges. Dans bon nombre de cas, la transformation et le laminage s'exécutent dans le même établissement. Dans nombre d'établissements, les procédés de fabrication dépassent le stade du laminage.

Table 54 - SHEET METAL PRODUCTS¹ - Concluded
Tableau 54 - PRODUITS DE LA TÔLE¹ - Fin

October 1 - 1958 - 1er octobre

¹**Sheet Metal Products** - Establishments primarily engaged in manufacturing sheet metal building material, enamelled kitchenware, galvanized sheets, stove pipes, auto stampings, metal bottle caps, eaves troughing and similar products. Establishments manufacturing tin cans and tinware or whose primary activity is tinsmithing and sheet metal work on construction projects are not covered.

¹**Produits de la tôle** - Etablissements s'occupant surtout de la transformation de la tôle en matériaux de construction, ustensiles de cuisine émaillés, tôles galvanisées, tuyaux de poêle, pièces embouties pour automobiles, capsules métalliques à bouteilles, gouttières de toit et produits analogues. Sont exclus les établissements s'occupant surtout de boîtes et articles en fer-blanc ou s'occupant de ferblanterie et de tôlerie relativement à des projets de construction.

¹Motor Vehicle Parts and Accessories – Establishments primarily engaged in manufacturing motor vehicle parts, bodies and body parts and accessories for use in motor vehicles, such as engines, brakes, clutches, axles, gears, transmissions, wheels, frames, tops, radiators, head lamps, springs and automobile hardware. Does not include the manufacture of tires and tubes, batteries, and automobile glass.

¹Pièces et accessoires de véhicules à moteur – Etablissements s'occupant surtout de la fabrication de pièces de véhicules automobiles, carrosseries et pièces de carrosseries et accessoires servant aux véhicules automobiles, tels que moteurs, freins, embrayages, essieux, engrenages, transmissions, roues, châssis, capotes, radiateurs, phares, ressorts et quincaillerie d'automobiles. Ne comprend pas la fabrication des pneus et chambres à air, accumulateurs et glaces d'automobiles.

Table 59 - RAILWAY ROLLING STOCK¹ - Concluded
Tableau 59 - MATÉRIEL FERROVIAIRE ET ROULANT¹ - Fin

October 1 - 1958 - 1er octobre

¹**Railway Rolling Stock** - Establishments primarily engaged in the building and rebuilding of locomotives of any type or gauge and railroad and street cars (including frames and parts) for freight and passenger service. This includes the manufacture of locomotives and cars by railway companies and repair work done in such locomotive shops.

¹**Matériel ferroviaire et roulant** - Etablissements occupés principalement à la construction et à la reconstruction de locomotives de tous types ou de tout écartement de voie et de wagons de chemin de fer et de tramways (y compris la structure et les pièces) pour les services marchandises ou voyageurs. Comprend la construction de locomotives et de wagons par les compagnies ferroviaires et les travaux de réparation exécutés dans ces ateliers de locomotives.

Table 64 – REFRIGERATORS, VACUUM CLEANERS AND MISCELLANEOUS ELECTRICAL PRODUCTS¹ – Concluded

Tableau 64 – RÉFRIGÉRATEURS, ASPIRATEURS ET DIVERS APPAREILS ÉLECTRIQUES¹ – Fin

October 1 – 1958 – 1er octobre

¹**Refrigerators, Vacuum Cleaners, and Miscellaneous Electrical Products** – Establishments primarily engaged in the manufacture of electrical household appliances for refrigerating, vacuum cleaning, and other purposes; electrical measuring instruments; electro-therapeutic and electro-medical apparatus, x-ray apparatus and tubes; electric lamps; electrical communication equipment (except radio and television); and wiring devices and supplies. The manufacture of lighting fixtures is not covered.

¹**Réfrigérateurs, aspirateurs et divers appareils électriques** – Etablissements s'occupant surtout de la fabrication d'appareils électriques domestiques pour la réfrigération, le nettoyage par aspirateur et autres fins; appareils électriques de mesure; appareils électro-thérapeutiques et électro-médicaux, appareils et ampoules de radiographie; ampoules électriques, installations électriques de communication (radio et télévision exceptés); et dispositifs et accessoires de filage. Est exclue la fabrication d'appareils d'éclairage électrique.

Table 71 – RAILWAYS
Tableau 71 – CHEMINS DE FER
October 1 – 1950 – 1er octobre

Note. – The figures shown in this table are minimum wage or salary rates as indicated in collective agreements on file in the Economics and Research Branch. When a range is given it covers the lowest and highest minimum rates in effect on the principal divisions of the major railways for that occupation. When a single figure is shown for an occupation it applies throughout all principal divisions of the major railways.

All classes other than the running trades are on a basic 8-hour day and 40-hour week.

Note. – Les données au présent tableau représentent des taux minima de salaires ou traitements tirés de conventions collectives dont dispose la division de l'Economique et de Recherches. Quand une marge est indiquée elle s'applique aux taux minima les plus bas et les plus élevés payés par les principales divisions des chemins de fer majeurs pour l'occupation mentionnée. Quand un seul chiffre est donné le taux s'applique à l'ensemble des principales divisions des chemins de fer majeurs.

Toutes les catégories autres que celles du personnel roulant observent une journée normale de 8 heures et une semaine de 40 heures.

Table 71 — RAILWAYS — Concluded
Tableau 71 — CHEMINS DE FER — Fin

October 1—1958 — 1er octobre

¹To obtain minimum rates per day multiply rate per mile by 150 for passenger conductor, passenger brakeman, and baggageman, and by 100 for other trades shown on a mileage basis.

²Rates per mile vary with the weight on drivers. Although few locomotives in excess of 350,000 pounds are in use, several diesel units may be operated by one crew, in which case the upper limits of the ranges shown would apply.

³Minimum is for less than 140,000 pounds; maximum is for 500,000—550,000 pounds.

⁴Minimum is for less than 140,000 pounds; maximum is for 350,000 pounds and over on a principal division of one line and for 500,000—550,000 pounds on the remaining principal divisions and lines.

⁵Minimum is for less than 140,000 pounds; maximum is for 500,000 pounds and over on a principal division of one line and for 500,000—550,000 pounds on the remaining principal divisions and lines.

⁶The range refers to minimum and maximum rates actually being paid.

⁷Machinist, boilermaker, blacksmith, plumber, sheet metal worker, cabinet maker, carpenter (coach, locomotive, and bench), welder, etc.

⁸Freight car carpenter, freight car painter, car inspector, car repairer, etc.

¹Pour obtenir le taux quotidien minimum des conducteurs de trains de voyageurs, serre-freins de trains de voyageurs, et préposés à bagages, multipliez le taux du mille par 150, et par 100 pour les autres catégories de personnel roulant rémunérées au mille.

²Les taux au mille varient selon le poids sur les roues motrices. Bien que peu de locomotives qui excèdent 350,000 livres soient en service, plusieurs unités-diesels peuvent être manoeuvrées par une équipe, dans lequel cas s'appliquent les taux plus élevés indiqués dans les marges.

³Le minimum est pour moins de 140,000 livres; le maximum pour 500,000 à 550,000 livres.

⁴Le minimum est pour moins de 140,000 livres; le maximum pour 350,000 livres et plus sur une principale division d'un réseau, et pour 500,000 à 550,000 livres sur le reste des principales divisions et réseaux.

⁵Le minimum est pour moins de 140,000 livres; le maximum pour 500,000 livres et plus sur une principale division d'un réseau, et pour 500,000 à 550,000 livres sur le reste des principales divisions et réseaux.

⁶La marge se rapporte aux taux minimum et aux taux maximum actuellement payés.

⁷Machiniste, chaudronnier, forgeron, plombier, ouvrier tôlier, ébéniste, charpentier (wagon, locomotive, et établi), soudeur, etc.

⁸Charpentier en wagons de marchandises, peintre de wagons de marchandises, inspecteur de wagons, préparateur de wagons, etc.

¹ Ferries, tugboats and self-unloaders are not included.

¹ Les traversiers, remorqueurs et déchargeurs automatiques sont exclus.

² Board and lodging supplied in addition to rates shown. Rates vary to a great extent according to size and type of vessel.

² Pension et logement sont fournis en sus des taux indiqués. Les taux varient sensiblement suivant la grosseur et le genre de navire.

³ Reporting units in the Atlantic Coast and Lower St. Lawrence region include some vessels operating under Great Lakes wage schedules. In the case of unlicensed personnel the Great Lakes rates are substantially higher than rates paid on other vessels in this region.

³ Parmi les unités de la côte de l'Atlantique et de la région du Bas Saint-Laurent ayant fait rapport, il se trouve certains navires auxquels s'applique l'échelle des salaires en vigueur sur les Grands Lacs. Dans le cas du personnel non breveté, les taux des Grands Lacs sont beaucoup plus élevés que les taux applicables aux autres navires de cette région.

⁴ Rates for male and female combined.

⁴ Taux pour employés masculins et féminins combinés.

| Prince Rupert | 2.56 |
| Vancouver | 2.56 |

¹Rates are obtained from collective agreements on file in the Economics and Research Branch, Department of Labour.

¹Les taux sont obtenus de conventions collectives aux archives de la Division de l'économique et de recherches, ministère du Travail.

²Premium rates are paid for handling of certain commodities and for evening and night work.

²Taux plus élevés pour manutention de certains produits et pour travail du soir et de nuit.

³No standard hours; work periods depend on arrival and departure of vessels and time required to load and unload.

³Heures de travail irrégulières, fixées d'après l'arrivée et le départ des vaisseaux, et le temps requis pour les charger et les décharger.

⁴Predominant rate in following ports:

⁴Représente taux prédominant dans les ports suivants:

Vancouver, Victoria, New Westminster, Port Alberni, and Chemainus.

⁵Predominant rate in following ports:

⁵Représente taux prédominant dans les ports suivants:

Quebec, Montreal, Fort William, Hamilton, Point Edward, Port Arthur, Port McNicoll, Sarnia, and Toronto.

Table 80 – RETAIL TRADE (Except Grocery, Meat and Produce Stores) – Concl'd
Tableau 80 – COMMERCE DE DÉTAIL (Autre que d'épiceries, viandes, de fruits et légumes) – Fin
 October 1 – 1958 – 1er octobre

¹*Salary rates for salespersons, both male and female were reported according to the following definitions.*

Salesperson – Class A

Requires little knowledge regarding the merchandise sold. Often works behind a counter, selling one or a variety of inexpensive commodities such as notions, candy, drug sundries, tobacco products, magazines, greeting cards, etc.

Salesperson – Class B

Requires enough knowledge of products to assist customers in making a selection. May sell various types of merchandise or specialize in a particular type of commodity such as wearing apparel, bedding, small electrical appliances, china, costume jewellery, general hardware, etc.

Salesperson – Class C

Requires detailed knowledge of products and considerable skill in salesmanship. Is often on salary and commission, or straight commission and may be required to follow-up prospective sales by calling on customer at his home. Products sold tend to be higher priced, such as furniture, refrigerators, television sets, power tools, air conditioners, jewellery, etc.

¹*Les taux de salaire pour vendeuses et vendeurs ont été rapportés selon les descriptions de classe suivantes:*

Vendeur(se) – Classe A

Ne possède qu'une faible connaissance de la marchandise vendue. Travaille souvent au comptoir à la vente d'un seul ou de divers produits, tels que menus objets, bonbons, produits pharmaceutiques, produits du tabac, magazines, cartes de voeux, etc.

Vendeur(se) – Classe B

Doit connaître suffisamment les produits pour aider la clientèle à faire son choix. Peut vendre divers produits ou se spécialiser dans la vente d'un type particulier de marchandise, tels que vêtements, literie, petits appareils électriques, vaisselle, bijouterie de fantaisie, quincaillerie, etc.

Vendeur(se) – Classe C

Doit connaître à fond les produits et être très habile dans la vente. Travaille souvent à salaire et à commission ou directement à commission, et peut avoir à donner des démonstrations pratiques du produit à l'extérieur. Les produits vendus sont ordinairement de prix plus élevé, tels qu'ameublements, réfrigérateurs, appareils de télévision, outils mécaniques, climatiseurs, bijouteries, etc.

DEFINITIONS OF OFFICE OCCUPATIONS

BOOKKEEPER, SENIOR

Keeps a systematic set of records of all business transactions of an establishment: examines and records data in appropriate record books or on special forms; balances books and compiles reports at regular intervals to show receipts, expenditures, accounts receivable, accounts payable, and other items pertinent to the operation of a business.

BOOKKEEPER, JUNIOR

Performs routine duties in bookkeeping department: reconciles bank accounts; posts and balances subsidiary ledgers; assists in keeping records of financial transactions.

CLERK, SENIOR

Under little or no direct supervision, performs advanced and complicated clerical duties requiring the exercise of considerable judgment and independent analysis and a considerable knowledge of departmental or company procedures: performs such types of work as preparing complex reports or maintaining complicated records, co-ordinating reports which require extensive preparation or involved calculations and control functions, and preparing special reports or summaries. May co-ordinate clerical work of a department or establishment.

CLERK, INTERMEDIATE

Under limited supervision, performs semi-routine clerical duties in accordance with established procedures of moderate complexity and requiring some judgment in the selection and interpretation of data: follows a standardized pattern in carrying out assignments and performs such types of work as checking invoices, preparing customs entries, posting data in record books, and preparing standard reports or summaries.

CLERK, JUNIOR

Under close supervision, performs simple clerical duties according to definite rules or specific instructions: performs assignments of a routine or repetitive nature, including such types of work as transcribing information from one record to another, filling in simple standard records

or reports, totalling column of numbers, addressing envelopes, and collating papers.

COST ACCOUNTING CLERK

Computes production or selling cost of products or services by calculating individual items such as labour cost, material cost, administrative overhead, and shipping costs. May analyse and interpret cost figures.

FILING CLERK

Keeps correspondence, invoices, and other records arranged systematically in file cabinets or other cases: locates and removes material as requested; records material removed; classifies material to be added. May do some clerical work in searching and investigating information contained in the files.

OFFICE BOY - OFFICE GIRL

Performs a variety of minor clerical and routine unskilled duties about a business office such as furnishing workers with clerical supplies from stock, delivering verbal and written messages, sealing and stamping envelopes, running errands and distributing and collecting mail.

MACHINE OPERATOR

Multilith Operator—Operates a lithographic or off-set duplicating machine to make duplicate copies of charts, graphs, schedules, and similar material from metal plates.

Billing Machine Operator—Operates a billing machine to prepare customers' statements, bills, and invoices.

Bookkeeping Machine Operator—Operates a bookkeeping or accounting machine to keep a record of business transactions.

Calculating Machine Operator—Operates an electrically or manually powered automatic calculating machine to perform basic arithmetic computations in business, accounting or statistical reports.

Key-Punch Operator, Senior - Combined with Junior for publications—Under general supervision, operates an alphabetic or numeric key-punch machine, and/or verifier, in recording a considerable variety of

DEFINITIONS OF OFFICE OCCUPATIONS – Concluded

pre-coded information and data on tabulating cards. May verify work of other operators.

Key-Punch Operator, Junior – Combined with Senior for publication—Under close supervision, operates an alphabetic or numeric key-punch machine in recording pre-coded standardized or repetitive information on tabulating cards. May operate a verifying machine to check accuracy of own work.

Tabulating Machine Operator—Operates a tabulating machine that automatically decodes data from punched tabulating cards and produces the information on printed form. May operate key punch, verifying and sorting machines.

MATERIAL RECORD CLERK

Records material ordered, received, appropriated, available, and withdrawn in an establishment, department, or on various jobs; assists in keeping stock at predetermined levels by issuing requisitions or advising superior of shortages. May take inventory.

ORDER CLERK

Receives orders for material or merchandise by mail, by phone, or personally from customer or company employee: gives or sends price quotations to customers and makes out order forms; sends or distributes, to the respective departments, orders to be filled.

PAYROLL CLERK

Calculates each worker's earnings and posts calculated data to payroll sheet, showing information such as worker's name, time, rate, deductions, and wages due. May assist Paymaster in writing pay cheques or in making up and distributing pay envelopes.

PRIVATE SECRETARY

Performs stenographic and clerical duties for an official: takes and transcribes dictation; answers routine correspondence on own initiative; handles confidential

reports; keeps executive's private files; handles telephone calls and arranges appointments.

STENOGRAPHER, SENIOR

Takes and transcribes dictation involving the use of unusual or technical terminology: takes dictation in shorthand, of letters, reports or memoranda dictated by officials; types material in prescribed form, recording it exactly as given or expanding general instructions into a more finished composition. May take dictation on a stenotype machine. May cut stencils for use in duplicating machine.

STENOGRAPHER, JUNIOR

Takes and transcribes dictation involving a normal range of business vocabulary; types material in prescribed form. May cut stencils for use in duplicating machine.

SWITCHBOARD OPERATOR

Operates a telephone switchboard to relay incoming, outgoing, and interoffice calls; takes messages for persons absent, keeps record of long-distance calls, and checks telephone bills. May perform duties of Receptionist.

TYPIST, SENIOR

Types letters, reports, tabulations, charts, and similar material: plans set-up and arrangement of complicated tables, combines material from several sources into one typing operation; types tables, reports and other material from very rough and involved drafts; copies material where close attention is required due to the frequent and varied use of technical and unusual wording. May perform similar work on stencils or hectograph originals.

TYPIST, JUNIOR

Types letters, reports, summaries or similar work from typed, printed or written matter where set-ups and terms are generally clear and follow a standard pattern. May perform similar work on stencils.

DÉFINITIONS DES EMPLOIS DE BUREAU

TENEUR DE LIVRES, SÉNIOR

Tient registre complet et systématique de toutes les transactions de l'établissement: vérifie des données et les inscrit dans les livres d'inscriptions ou sur des formules particulières; balance les livres et rédige des rapports à intervalles réguliers afin d'indiquer les recettes, dépenses, dettes actives et nombre d'autres postes ayant trait à l'exploitation d'une entreprise.

TENEUR DE LIVRES, JUNIOR

Exécute travail de routine dans le service de tenue de livres; effectue le raccord avec les comptes de banque; fait les reports aux grands livres auxiliaires; aide à maintenir le registre des transactions financières.

COMMIS SÉNIOR

Sous peu ou point de surveillance immédiate, remplit fonctions supérieures et compliquées exigeant l'exercice d'une somme considérable de jugement et d'esprit analytique et une connaissance approfondie du processus des divers services et de l'entreprise: exécute des tâches comme la préparation de rapports complexes ou le maintien de registres compliqués, la coordination de rapports exigeant une préparation approfondie ou des calculs et des contrôles, et la préparation de rapports ou résumés spéciaux tirés des données des dossiers.

COMMIS INTERMÉDIAIRE

Sous surveillance restreinte, remplit des fonctions semi-routinières conformément aux processus établis de caractère modérément compliqué et exigeant une certaine somme de jugement dans le choix et l'interprétation des données: observe une méthode uniforme dans l'exécution de son travail et fournit des tâches comme la vérification des factures, la préparation des écritures relatives à la douane, le report de données aux registres et la préparation des rapports ou résumés types. Les fonctions de cet emploi peuvent être spécialisées ou de caractère varié.

COMMIS JUNIOR

Sous surveillance étroite, remplit fonctions simples et de routine d'après des règles bien déterminées ou des instructions précises; exécute des tâches

de routine ou exigeant beaucoup de répétitions, y compris la transcription de renseignements d'un registre à un autre, le remplissage de formules et rapports, simples, l'addition de colonnes de chiffres, l'inscription d'adresses sur enveloppe et la réunion de documents.

COMMIS, PRIX DE REVIENT

Estime le prix de revient de production ou de vente des produits en calculant le coût individuel, aux chefs notamment du coût de main-d'oeuvre, de matériel des frais généraux d'administration et d'expédition. Peut être appelé à analyser et interpréter les prix de revient.

COMMIS CLASSEUR

Entretient en un ordre systématique la correspondance, les factures et autres documents dans les classeurs ou autres dispositifs de classement; retrace et retire les documents sur demande; note les documents retirés; classe les documents à ajouter. Peut effectuer certaines tâches de bureau en cherchant et étudiant les renseignements que renferment les classeurs. Travaille sous surveillance limitée.

GARÇON DE BUREAU (Fille de bureau)

Remplit diverses fonctions non spécialisées de moindre importance et routinières dans un bureau d'affaires, comme livrer aux employés les fournitures provenant du stock, transmettre les messages oraux ou écrits, sceller les enveloppes et y apposer des timbres, faire les courses, la distribution et la levée du courrier.

OPÉRATRICE DE MACHINE

Opératrice à multilith—Actionne une machine à lithographier ou à rotocalcographier pour tirer, au moyen de plaques métalliques, des copies de diagrammes, graphiques, tableaux et autres documents du même genre.

Opératrice à la machine à facturer—Se sert d'une machine à facturer pour préparer les états de compte, les effets et les factures des clients.

Opératrice à la machine à comptabilité—Se sert d'une machine à tenue de livres ou à comptabilité pour enregistrer les transactions d'affaires.

DÉFINITIONS DES EMPLOIS DE BUREAU – Suite

Opératrice à la machine à calculer—Sert d'une machine automatique à calculer, mue par électricité ou à main pour faire les calculs arithmétiques fondamentaux des rapports d'affaires, de comptabilité ou de statistique.

Opératrice sénior à la poinçonneuse à clavier—Publié conjointement avec *Opératrice junior etc.*—Sous direction générale, conduit une machine mécanographique (alphabétique ou numérique) à perforer et (ou) à vérifier pour transcrire sur des fiches mécanographiques une grande variété de renseignements et de données préalablement codées. Peut avoir à vérifier le travail d'autres conductrices.

Opératrice junior à la poinçonneuse à clavier—Publié conjointement avec *Opératrice Sénior etc.*—Sous surveillance étroite, conduit une machine mécanographique (alphabétique ou numérique) à perforer pour inscrire sur des fiches mécanographiques des renseignements préalablement codifiés d'ordre uniforme ou répétitif. Peut avoir à conduire une machine mécanographique à vérifier pour contrôler l'exactitude de son travail.

Opératrice à tabulateur—Fait fonctionner un tabulateur qui déchiffre automatiquement les renseignements fournis par les cartes poinçonnées et les traduit en clair imprimé. Peut être appelé à faire fonctionner poinçonneuse à clavier, vérificatrice et trieuse.

COMMIS, AU REGISTRE DU MATÉRIEL (Commis au registre du stock)

Enregistre le matériel commandé, reçu, réparti, disponible ou retiré du stock dans le cas d'établissement, de département, ou de tâches diverses; aide à maintenir stock suffisant à des niveaux déterminés à l'avance en donnant les commandes nécessaires ou en avertissant ses supérieurs de la situation existante. Peut être appelé à dresser l'inventaire.

COMMIS AUX COMMANDES

Reçoit les commandes de matériaux ou marchandises par poste, téléphone ou en personne du client ou de l'employé de la compagnie; donne ou fait parvenir la liste des prix aux clients, et rédige les formules

de commandes; transmet ou achemine les commandes à remplir aux départements ou services concernés.

COMMIS AU BORDEREAU DE PAIE

Calcule le montant de la paie de chaque employé et reporte les données obtenues au bordereau de paie, inscrivant des renseignements tels le nom de l'employé, ses heures de travail, le taux de rémunération, les déductions et le salaire dû. Peut être appelé à aider le payeur à faire les chèques de paie et à préparer et distribuer les enveloppes de paie.

SECRETAIRE PRIVÉE

Accomplit le travail sténographique et le travail de bureau pour le compte des employés supérieurs; prend la dictée et transcrit les notes; répond de son propre chef à la correspondance de routine; s'occupe des rapports confidentiels et des dossiers particuliers des employés supérieurs; se charge des appels téléphoniques et fixe les rendez-vous.

STÉNOGRAPHE SÉNIOR

Prend et transcrit la dictée exigeant l'emploi d'une terminologie exceptionnelle ou technique; prend en sténographie lettres, rapports et mémoires dictés par des employés supérieurs; dactylographie la matière dans la forme prescrite, l'inscrivant exactement telle que dictée ou rédigeant des instructions générales sous une forme plus littéraire. Peut être appelé à prendre la dictée sur sténotype. Peut avoir à découper les baudruches pour machine à polycopier.

STÉNOGRAPHE JUNIOR

Prend et transcrit dictée, ce qui exige connaissance du vocabulaire courant en affaires; dactylographie la matière dans la forme prescrite. Peut avoir à découper les baudruches pour machine à polycopier.

TÉLÉPHONISTE AU STANDARD

Se sert d'un standard ou poste central pour brancher des postes intérieurs entre eux ou sur le réseau urbain; accepte les messages pour les personnes absentes, enregistre les appels interurbains, et vérifie les comptes de téléphone. Peut aussi remplir les fonctions de réceptionniste.

DÉFINITIONS DES EMPLOIS DE BUREAU – Fin**DACTYLOGRAPHE SÉNIOR**

Dactylographie lettres, rapports, tableaux statistiques, graphiques et autres travaux du même genre; organise la disposition de tableaux compliqués; réunit la matière de diverses sources en un même travail dactylographié; dactylographie des tableaux, rapports et autres matières provenant de brouillons difficiles et compliqués; copie de la matière exigeant une attention soutenue à cause de l'usage fréquent de

termes techniques et exceptionnels. Peut être appelé à faire un travail analogue sur baudruche ou sur copie maîtresse d'héctographe.

DACTYLOGRAPHE JUNIOR

Dactylographie lettres, rapports, résumés ou travaux du même genre à même un texte dactylographié, imprimé ou manuscrit dont la disposition et les termes sont généralement clairs et de forme courante.
